Stacks

In this assignment you will write a class `Stack` that elements a stack based on a doubly linked list. Your class should extend the doubly linked list class.

```
class Stack extends LinkedList {

    private int size;

    // Create your constructor for your class
    public Stack(){

    }

    // Add an element to the Stack
    public void add(int data){

    }

    // Removes the first element in the stack and returns it.
    public int remove(){
        int data;

        return data;
    }

    // Returns the size of the stack
    public int size(){

    }

}
```
